PART IV · CHORDS · 8

Slash chords

C/E means one chord with a chosen bass note: play a C chord, with E as the lowest note. It is not a fraction, and not two chords.

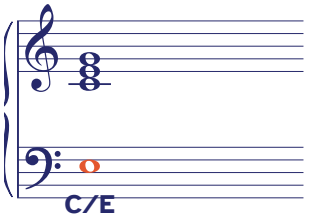

THE SECRET
Chord before the slash, bass note after it.

C/E

the chord
right hand

the bass
left hand, lowest note

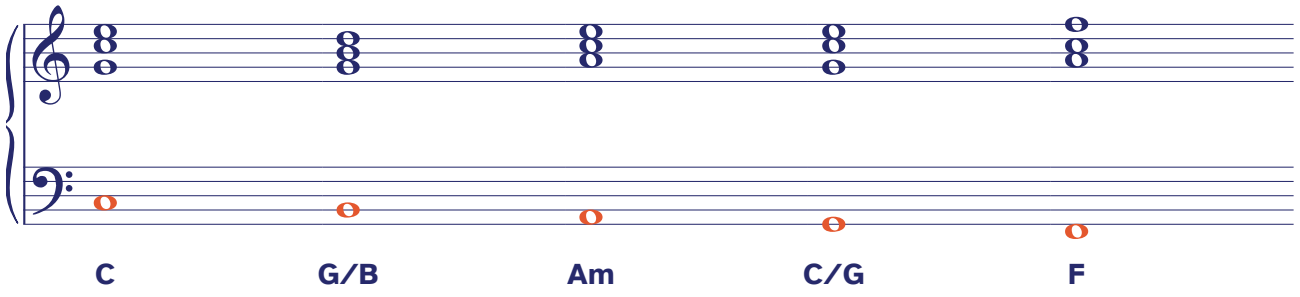

1. Before the slash: the **chord**. C means C E G, in the right hand.
2. After the slash: the **bass**. E goes in the left hand, below everything.
3. Play them together: **C/E**, “C over E”.

Four jobs for a slash chord

JOB	EXAMPLE	THE BASS NOTE IS	WHAT YOU HEAR
Inversion	C/E · C/G	a note of the chord	smoother changes (p. 96)
Walk-down	C · G/B · Am	one step down each time	a bass line that walks down
Pedal	F/C · G/C	the same note, held	the chords change above it
Colour	F/G · D/C	not in the chord	open, modern: pop, gospel

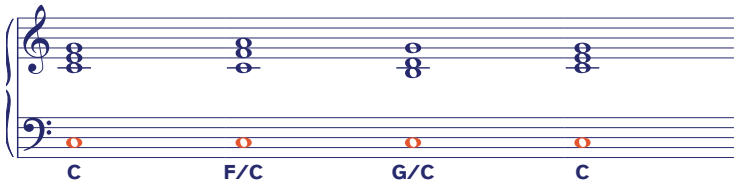

Job 2: a bass that walks down

The red bass walks straight down, C B A G F, while the right hand moves a step at most. G/B and C/G make the steps possible.

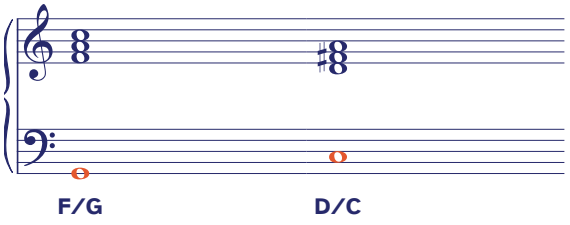

PART IV · CHORDS · 8 · CONTINUED

Job 3: a pedal, one bass under everything

The bass holds C while the chords change above it: C, F/C, G/C, C. The chords change while the C stays. (It is called a pedal after the organ's foot pedals, which hold long low notes.)

Job 4: a bass from outside the chord

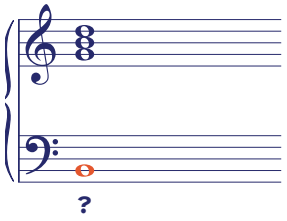

F/G: F A C over a G. G is not in the F chord, so it floats, open and unfinished. Pop and gospel players love it.

D/C: D F♯ A over a C. The C is not in the D chord, so it rubs against the chord.

EXAMPLE 1

Name the slash chord

1. **The right hand:** which chord is G B D?
2. **The lowest note:** which note is in the left hand?
3. **Write chord, slash, bass.** Is the bass in the chord?

It is **G/B**, "G over B": B is in the G chord, so it is the 1st inversion.

GAME

Read the slash

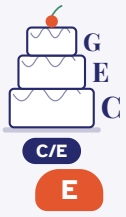

1	2	3	4
G/B	C/G	F/A	Am/C

Before the slash: the chord. After it: the bass note. Which note goes in the left hand?

Answer: 1 B · 2 G · 3 A · 4 C.

PART IV · CHORDS · 8 · CONTINUED

TRY IT · 10 SECONDS

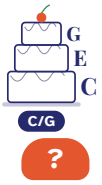

Right hand C, left hand E.

Play C E G in the right hand and a low E in the left: C/E. Now try a low A under it: what would you call that?

EXAMPLE 2

C/G: which note goes in the left hand?

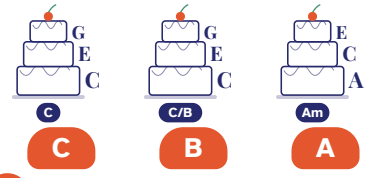

1. **Before the slash:** the chord. Which three notes go in the right hand?
2. **After the slash:** the bass. Which note goes low in the left hand?
3. **Play them together.**

Right hand C E G, left hand a low **G**: the C chord standing on G.

EXAMPLE 3

Walk the bass down: C, C/B, Am

1. **Right hand** holds C E G for two chords.
2. **Left hand** walks down: C, then B.
3. **Then A**, under A C E: Am.

The bass walks **C B A**, one step at a time, while the chords hardly move.

THINK OF IT A cake and the plate it stands on: the slash says which cake (the chord) and which plate (the bass). Same cake, new plate, new view.

TRAP

- × Writing it back to front: the chord comes first, the bass second. E/C would be an E chord over C.
- × Letting the right hand dip below the bass: the letter after the slash must be the lowest note you play.
- × Forgetting the chord itself: in C/E the right hand still plays the whole C chord, C E G, not just C.
